Operating System supported: XP, Vista, Windows 7, Windows 8, Windows 2008, Windows 2012

Disk Space : Min 900MB (Requires .Net 2.0 or 3.5 Framework)

CPU / Memory: Operating System Minimum Requirements.

Infrastructure: System Requires a local windows server and wireless coverage.

How It Works

Existco Plant Control System is a simple, yet powerful tool for any meat, poultry, seafood or fruit and veg company.

The data collected from various touch screens, and mobile computers in the plant is sent live to a centralised server for storage in the Microsoft SQL Server Advanced Database engine.

The data can then be shared and manipulated with permissions by multiple system users on their individual PC's.

The solution is on premises (not cloud) but has very good multisite capabilities with synchronization of data between multiple sites.

The data collected and stored in the database engine is then used to generate reports, raise alerts, interface to customer exiting accounting system, and much more.

The solution uses network connections and wireless connectivity (Wi-Fi) to keep all aspects of the operations connected live to the server to collect and process data.

The system uses the latest technologies in database, mobility, server and platforms.

The solution is agile and highly saleable.

Whether you have 1 station or 100+ stations the system can grow with your business needs.

Why Existco

Existco is a reputable solution provider with alliances with the major brand names such as Zebra, Intermec, Datalogic, Motorola, Brady and many more.

Existco is also a Microsoft Certified Partners and GS1 Alliance Partner.

Existco has a good reputation in the meat, poultry, seafood and fruit and veg industries.
