The Intermec SR61Bex is the only handheld scanner on the market with integrated near/far area imaging technology, offering customers the unparalleled flexibility to read multiple symbologies, omni-directionally at distances of 6 inches to over 50 feet. It incorporates rugged design with Bluetooth® wireless communication.

The SR61Bex eliminates the need for multiple scanners and substantially reduces total cost of ownership. With the SR61Bex, users can scan 1D, 2D, composite and postal codes; capture images, signatures and documents; read at near and far distances; and successfully cope with damaged, poorly printed or partially obscured codes in variable lighting conditions.

In addition, the cordless SR61Bex features a personal area network (PAN) radio based on Bluetooth® communication protocol, making scanning easier and safer with no costly cables to damage or become entangled. Users gain mobility up to 100 feet from the host and can connect up to seven SR61Bex scanners to one Intermec host device.

Operators of fork trucks equipped with an Intermec vehicle-mounted mobile computer such as the CV30 or CV60, will appreciate how the near/far scanning capability of

the SR61Bex allows them to seamlessly transition between scanning objects held in their hand to scanning pallets located more than 50 feet away, a common requirement in warehouse management applications.

With omni-directional scanning, laser pointer auto-determining illumination and centered decoding, the SR61Bex makes it easy to scan at variable distances, lighting conditions and angles, improving worker productivity and accuracy.

The SR61Bex is ideal for inventory management, picking, shipping and receiving, cross docking, work-in-process, tool crib, and pallet tracking scanning applications.

The SR61Bex includes Intermec's EasySet™ software setup tool for easy configuration and personalization to meet the specific needs of the user's environment, whether that includes reading specific barcode symbologies, decoding poor quality or damaged barcodes or utilizing image capture for proof of delivery and point of service applications. Users can also quickly set security options, select beeper tones and volumes, specify good read and error read responses, and make many other customizations.
