- Professional service

System Requirements

Operating System supported: Windows 2000, XP, Vista and Windows 7.

Disk Space : Min 160MB (Requires .Net 2.0 or 3.5 Framework)

CPU / Memory : Operating System Minimum Requirements

How It Works

Existco Mobile Picking for QuickBooks is a simple YET powerful tool for every organization.

QuickBooks Sales Orders are created and modified within QuickBooks program on the host PC. The data is then downloaded to the mobile computer via USB connection (Active-sync).

Barcode labels are printed and placed on products, and/or some products may already have barcodes.

To process an order, simply select an order from the order list, and then scan product barcodes with the mobile computer.

Only valid Product barcodes will be accepted for the order.

The data collected is saved on the Mobile computer, and users have the ability to edit saved information if needed.

Once finished, users dock the mobile computer in the cradle and perform data synchronization to host PC.

At this point, the system will upload to QuickBooks the Quantity picked information, and generate appropriate invoices in QuickBooks for those scanned products.

Yes, that is it. Quick and easy.
