

TotalCount Dual Sensor Head People Counter

This People Counter uses a pair of push-in style eye-beams – one each side of the entrance – usually in the door jams. These Dual Sensor Heads (DSH) are basically the type used in auto doors to stop the doors closing if someone stands in the doorway.

Dual Sensor Heads

When installed these Sensor Heads being quite small – 15 mm in diameter and a neutral black - go virtually unnoticed. For shops the suggested height for installation is 1.3 metres – to not count small children, shopping trolleys and prams.

Having a Sensing range of up to **10 metres** the DSH suits auto doors and wider opening where extremely small discrete sensors are needed.

These sensors are made in Australia work well in harsh environments and like all our sensors not affected by sunlight.

Control Module

This contains the electronics for the Sensor Heads and communicates to the Counter Module. The Control Module in a matt black lugged box 111 x 67 36 mm.

The TotalCount DES3 Counter Module

The Counter is an 8 digit LCD display with a digit height of 8 mm. The unit can handle really high numbers and is clear and easy to read.

To **Reset the Counter** to Zero a Magnet is applied externally to the right of the LCD – two Magnets are included in the pack.

The Counter Module and accompanying electronics are housed in a matt black lugged box measuring 66 x 50 x 34 mm.

The Pack Contains:

- Two Sensor Heads each with 4 metres of Shielded Cable
- DSH Control Module
- TotalCount Counter Module
- 9-Volt DC Unregulated Plug-Pack.
- Screws etc for ease of installation.
- Magnets (2)
- Instruction Leaflet

The TC- DSH can also come with **Auto-Halve, Battery Back-Up** and **Addmitter Transmitter/Receiver**
