ATEX RFID Technology Overview and Benefits

RFID (Radio Frequency Identification) in general is a proven technology and since more than 15 years in use in applications like automotive tracking and tracing, waste management, industrial logistics, animal identification and security, ticketing and access. Also the gas cylinder identification application was one of the first projects where RFID TAGs were used in volume and series quantities to track process flow and rental supply chain. TECTUS ATEX certified RFID technology has been used successful first in the coal mining industry followed by the oil & gas exploring, the LPG gas cylinder supply chain management and in chemical industry for logistics improvement and optimisation of maintenance in cooperation with ATEX certified handheld PDAs.

There are about 4 different RFID operating frequencies (LF < 135 kHz, HF 13,56 MHz, UHF 868 MHz and 2,45 GHz) in use each to be best proven for different applications.

TECTUS Transponder Technology products and support enables customers to use the

The Most Convenient RFID Solution

- -> Improved logistics and maintenance /service process
- -> Reduction of "no action" in maintenance
- -> Avoidance of difficult object identification
- -> Man power and time savings
- -> Faster turnaround
- -> Better transparency (reduction of failures)
- -> Automatic data transmission
- -> Precise unique identification of objects
- -> Reading reliability with high percentage of success
- -> Long term RFID knowhow and professional industry experience
- -> Customer oriented price performance ratio
- -> Fast implementation based on TECTUS experience

ATEX RFID from TECTUS Transponder Technology GmbH

TECTUS Transponder Technology GmbH is the leading innovative company in the field of industrial identification and is one of the most experienced ATEX RFID Expert specialist for ATEX certified RFID system components and solution providers worldwide.

TECTUS offers for several applications a complete system component solution for the tracking and "real time available at desk" inventory of assets by means of RFID (radio frequency identification).

This system component solution consists of TECTUS ATEX explosion protected RFID equipment, industrial IT hardware, optional also a customer specific dedicated database, communication software and optional also tag placement devices.

Especially developed ATEX RFID TAG devices cooperating with TECTUS ATEX certified stationary and handheld RFID readers enable manufacturers and supplier companies to optimise their supply management and maintenance processes.

manufacture:

The certification body of DEKRA EXAM GmbH, notified body No 0158 in accordance with Article 9 of the Directive 94/9/EC of the European Parliament and the Council of 23 March 1994, certifies that the manufacturer has a production quality system, which complies with Annex VI of the Directive. In the updated annex all equipment and protective systems and their certificate numbers are listed.

This certificate is based on audit report ZQS/E262/11, issued 2011.08.08 and is valid until 2014.06.14. This certificate can be withdrawn if the manufacturer no longer satisfies the requirements of Annex VI.

Results of periodical re-assessments of the quality system are a part of this certificate.

According to Article 10 (1) of the Directive 94/9/EC the CE marking shall be followed by the identification Number 0158 of DEKRA EXAM GmbH as notified body involved in the production control stage.

ATEX RFID Stationary Products 125 kHz/134 kHz, 13,56* MHz/ UHF*

TECTUS ATEX certified RFID readers are usable in industrial environment and for security & access applications as well. The stationary RFID readers are designed to be used in logistics and maintenance applications in rugged environment and hazardous areas like chemical plants, gas filling stations, refinery, mining, onshore and offshore plants.

TECTUS ATEX RFID readers cooperate perfectly with TECTUS ATEX RFID TAGs and are even useful in applications where metal and humidity may concern.

Each RFID TAG is optimised with our RFID readers and writers. Our flexibility allow you to receive quickly samples and deliveries of our standard ATEX parts. Upon request our engineers would be pleased to develop and support

Typical ATEX RFID Applications are the identification of objects in explosive and hazardous atmospheres. TECTUS ATEX RFID makes life easier in supply chain management and industrial logistics of metal container and drums, etc.

In the area of petrochemical plants, the onshore and offshore industry ATEX RFID TAGs are most useful and essential. ATEX RFID based paperless automated maintenance management of valves and pipes avoid failures and optimise processes.
