

The *Viper*TM ... it strikes !

The new viperTM RF mobile computer from Datalogic is first in a new family specifically designed for industrial environments: **mobi**

le@workTM. The first characteristic of the **ViperTM** is its ruggedness: you can drop it from 1.8 metres onto concrete or get it wet and it resists. But the **ViperTM** isn't just tough, it's also practical. It's got the biggest display on the market and its intuitive keyboard is designed for heavy use and to exploit the fully DOS compatible PC-like architecture to the maximum. In addition, it is light-weight, well-balanced, shaped to fit the hand and the antenna is internal. The **ViperTM** is "**RadioReady**" in that it has extremely flexible radio connectivity compliant with both IEEE 802.11b and OpenAir standards. Integration support via terminal emulation or PC based RAD (Rapid Application Development) languages is available, helping you get the **ViperTM** operating on any legacy system in the minimum of time. It is ideal for warehousing and shop floor, where mobility, reliability and robustness are a must.

The ViperTM ... it Strikes!
