

# Stainless Steel Printer Enclosure

Model : WSPRTENCSS and WSPRTENCMSML

Accidental water damage can be expensive and also cause production downtime. The WSPRTENCSS and WSPRTENCMSML printer enclosures are designed to protect your printer against water damage caused by an end of day cleaning of the production area. During production, the front cover can be opened to allow easy access to printed labels.

A drawer mechanism is used to slide the printer out of the enclosure during label roll changes. At the end of the day's production, the front cover can be closed with the use of stainless steel latches and the printer is now protected against stray jets of water.

## FEATURES

WSPRTENCSS / WSPRTENCMSML

- stainless steel construction
- drawer system for ease of label roll changes
- stainless steel latches to securely close the front cover at the end of the days production
