

PowerGen 2000

Rapid Application Development System

Features

- Saving cost solution
- No prior programming knowledge
- Simple yet powerful Windows programming environment
- Program simulation directly on PC

General Description

PowerGen 2000 is a comprehensive easy-to-use and high-productivity development tool for the Formula batch terminals under Windows 95, 98 and Windows NT, delivering the power to create widely deployable applications. This powerful application generator is for developers who don't need to know C language programming; point-and-click program construction allows quick development cycle and cost saving.

Creating an application with PowerGen 2000 is child's play: the application rapidly transforms into a fully fledged program by simply selecting the functions progressively from the Tool Bar and completing some Dialog Boxes.

PowerGen 2000 is easy and productive: for example, in a few minutes you can create a simple data acquisition program for codes and quantities.

Another useful feature is the modification of an existing application with full cut-and-paste support.

Your PowerGen 2000 application can use up to 15 data files residing in the Formula terminal.

Program debugging will from now on be a more simple and productive operation: you will no longer need to download the application onto the Formula terminal to check functioning.

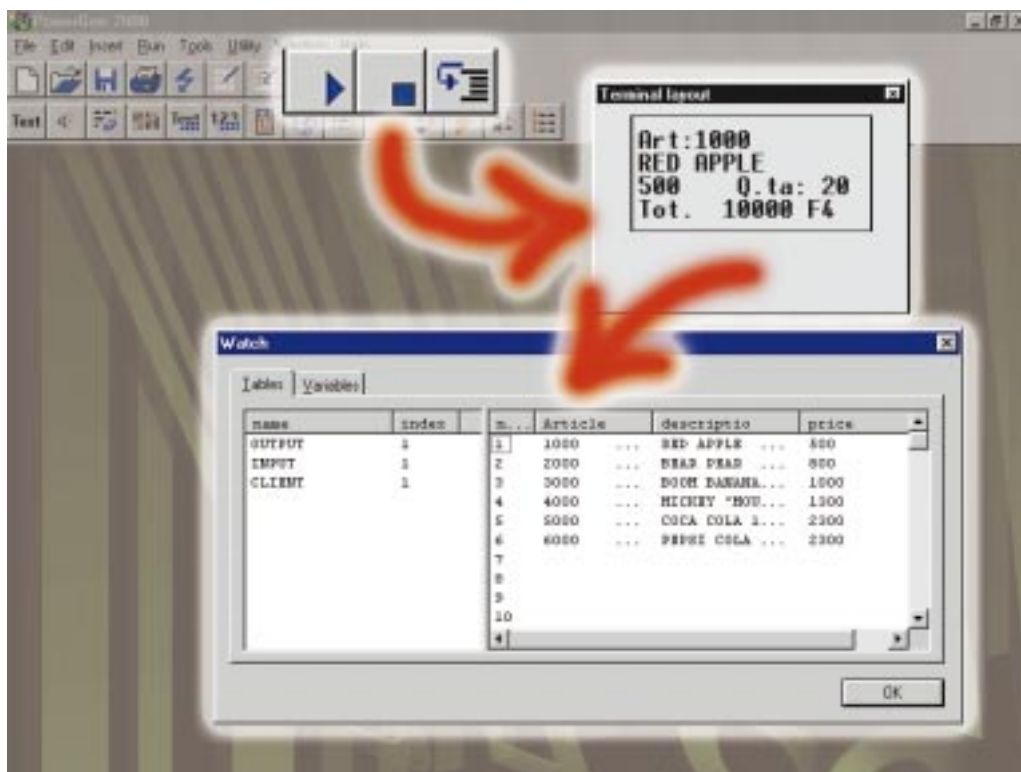

Most of the test can be performed interactively under PowerGen itself: you can try out the program, modify it, and immediately check the effects of your changes using the integrated simulator.

Whether you're generating applications, modifying or debugging them, everything will be easier and more productive with PowerGen 2000.

The Tool Bar in PowerGen 2000 allows you to access a series of buttons, each associated to one of the 14 simple, yet powerful, functions and to simply and interactively proceed with creating your customized application.

All PowerGen functions are easily recognizable thanks to the icon on the button.

An incorporated simulator allows to check the working of the created application for the Formula terminal, directly on PC in the PowerGen program.

PowerGen 2000 is an application generator for the following Formula products:

- > Formula 660 Display Pen
- > Formula 725 Handheld Laser Terminal
- > Formula 734 Pocket Laser Terminal
- > Formula 732 Wizard Laser Terminal
